DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10, 13, 14, and 28-32, drawn to an electrophoretic medium, classified in class 359, subclass 296. Claims 6-10 are being grouped together with the electrophoretic medium since these claims are the process of forming an electrophoretic medium and could be searched together with claims 1-5, without any undue burden on the examiner. Claims 28-32 are being grouped together with the electrophoretic medium since these claims are the process of forming an electrophoretic display and could be searched together with claims 1-5, without any undue burden on the examiner.
 - II. Claims 11, 12, 15 and 16, drawn to electro-optic display, classified in class 359, subclass 315.
 - III. Claims 17-27, drawn to an article of manufacture, classified in class 359, subclass 316. Claims 23-27 are being grouped together with the article of manufacture since these claims are the process of forming an electro-optic display and could be searched together with claims 17-22, without any undue burden on the examiner.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be

Art Unit: 2873

used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by another and materially different process. Specifically, the electro-optic display can be made without the step of release sheet disposed on the opposed side of the first adhesive layer and removing the release sheet.

3. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the electrophoretic medium can be made without the optical biasing element specifically arranged to modify an optical characteristic of the display element. The subcombination has separate utility such as being used in a light modulating device.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 2873

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
